

# An Introduction to Programming Using Visual Basic 2017

## Chapter 1, 2 An Introduction to Computers and Problem Solving

## Hardware and Software

- Hardware
  - physical components of a computer
- Software
  - set of instructions that tell computer what to do

Chapter 1 - VB 2017 by Schneider

2

## Programming Languages

- Low level (machine language)
  - Hard for humans to understand (0s and 1s)
- High level (more English-like)
  - More easily understood by humans
  - Instructions like If ... Then, Do While ..., arithmetic statements

Chapter 1 - VB 2017 by Schneider

3

## What is Programming?

- Problem solving
  - break problem down into steps
- Algorithm
  - set of step by step instructions
- Program
  - set of step by step instructions that tell computer what to do
  - written in a programming language
  - must be written so computer understands them
  - must follow set of syntax rules

Visual Basic 2017

4

## Basic Programming Tasks

- Declarations
  - commands to tell computer what data is used in a program
- Input (raw data)
  - data entered into computer from user
- Processing (calculations, formatting, sorting ...)
  - work done by the program
- Output (information)
  - results or answers

Visual Basic 2017

5

## Following Directions

### Computer

- does only what you tell it to do
- follows directions exactly
- not bored by repetition
- almost never makes a mistake

Visual Basic 2017

6

## Programmer/User

- Analyst
  - person(s) that develops specifications, designs program
- Programmer
  - person(s) that creates algorithm, writes code, tests program
- User
  - person(s) that uses finished program
- You will be both programmer and user

Visual Basic 2017

7

## Visual Basic Programming

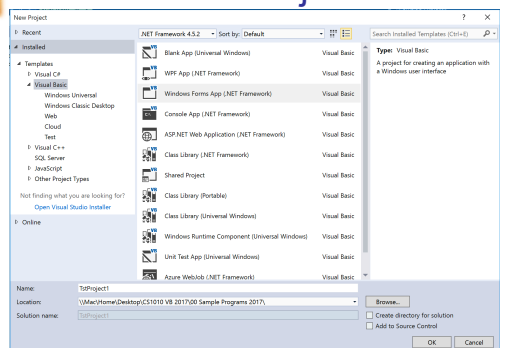

- Access Visual Basic
- Create a Visual Basic project
- Save a Visual Basic project
- Develop a Visual Basic project
- Run a Visual Basic program
- Review
- Debug a Program (correct errors)

Visual Basic 2017

8

## Create a New Project

## Sample VB Program

Visual Basic 2017

10

## Running a Visual Basic Program

- 1.
- 2.
- 3.

Visual Basic 2017

11

## Saving a Visual Basic Project

- 1.
- 2.
- 3.

Visual Basic 2017

12

## Opening a Visual Basic Project

- 1.
- 2.
- 3.

Visual Basic 2017

13

## Turning in a Visual Basic Project Electronically

- 1.
- 2.
- 3.
- 4.

Visual Basic 2017

14

## Developing a Visual Basic Project

1. Design User Interface
  - Add controls
  - Set Properties
2. Determine events each control should recognize
3. Write Event Procedure Code

Visual Basic 2017

15

## Set Properties

Categorized view    Alphabetical view

Visual Basic 2017

16

## Set Properties

Visual Basic 2017

17

## Set Name Property

- Name used to refer to a control in code
- Name must begin with a letter
- Must be less than 215 characters long
- May include numbers and the underscore
- Use appropriate 3 character naming prefix

Visual Basic 2017

18

## Control Name Prefixes

Control	Prefix	Example Setting
button	btn	btnCalcTotal
label	lbl	lblEnterAmount
text box	txt	txtAmount
list box	lst	lstOutput

Visual Basic 2017

19

## Running a Visual Basic Program

- What happens when you run a Visual Basic program?
- What is an event?
- What is an event procedure?
- How do you create an event procedure?

Visual Basic 2017

20

## Code Editor

Visual Basic 2017

21

## Changing Properties of Controls in Code

*controlName.property = setting*

**Examples:**

```
txtQuote.Text = "I like life, it's something to do."
txtQuote.ForeColor = Color.DarkRed
txtQuote.TextAlign = HorizontalAlignment.Center
```

Visual Basic 2017

22

## IntelliSense

Automatically pops up to give the programmer help.

Visual Basic 2017

23

## Review: Form

- Contains one or more controls
- Text property default is **Form1**
- Enter a more meaningful name
- Where does form's text property appear?
- DO NOT change (Name) property

Visual Basic 2017

24

## Review: Button

- Name property prefix \_\_\_\_\_
- Where does Text property appear?
- What is most common event?
- Purpose

Visual Basic 2017

25

## Review: Label

- Name property prefix \_\_\_\_\_
- What is most used property?
- Purpose?
- Usually placed to left of \_\_\_\_\_

Visual Basic 2017

26

## Review: Text Box

- Name property prefix \_\_\_\_\_
- What is most used property?
- Purpose?
- Common events?

Visual Basic 2017

27

## Program Errors (Bugs)

1. Syntax (Compile-time) Errors
2. Run-time Errors
3. Logic Errors

Debugging - process of removing errors (bugs) from your code

Visual Basic 2017

28

## 1. Syntax Errors

- Spelling, punctuation, grammar errors detected by:
  - Code editor as you type
  - Compiler when you compile (build)
- What are syntax (compiler) errors below?

```
txtHello.Text = Hello World
tstHello.Text = "Hello World"
txtHello.Text = "Hello World"
```

Visual Basic 2017

29

## Syntax Errors Detected by Compiler

Visual Basic 2017

30

## Syntax Errors Detected by Compiler

Error List					
<div> <div>Entire Solution</div> <div>2 Errors</div> <div>0 Warnings</div> <div>0 of 3 Messages</div> <div>Build + IntelliSense</div> </div>					
Search Error List					
	Code	Description	Project	File	Line
	BC30451	'txtQuote' is not declared. It may be inaccessible due to its protection level.	ch02_Quotes	Form1.vb	6
	BC30456	'for' is not a member of 'TextBox'.	ch02_Quotes	Form1.vb	13

Visual Basic 2017

31

## 2. Run-time Errors

- Caused by running program containing statement that computer cannot execute
- E.g., Attempting impossible arithmetic operations like divide by zero, calculations with nonnumeric data
- Stops execution (running) of program

Visual Basic 2017

32

## 3. Logic Errors

- Program compiles and runs without errors
- But produces incorrect results

Visual Basic 2017

33

## Event Procedures

```
Private Sub objectName_event(...)
    Handles objectName.event
    statements to handle event
End Sub

Private Sub btnTruth_Click(...)
    Handles btnTruth.Click
    txtQuote.Text = "Tell the truth and run."
    txtQuote.ForeColor = Color.Black
End Sub
```

Visual Basic 2017

34

## Changing Properties in Code

- Program statement to set a property:  
*controlName.property = setting*
- Examples:  

```
txtQuote.ForeColor = Color.Black
txtQuote.Text = "Hey now!"
btnFuture.BackColor = Color.Blue
```
- These are assignment statements

Visual Basic 2017

35

## Sample Code

```
Private Sub btnLife_Click(...) Handles btnLife.Click
    txtQuote.Text = "I like life, it's something to do."
    txtQuote.ForeColor = Color.Black
End Sub

...

Private Sub btnTruth_Click(...) Handles btnTruth.Click
    txtQuote.Text = "Tell the truth and run."
    txtQuote.ForeColor = Color.Black
End Sub

Private Sub txtQuote_TextChanged(...) Handles txtQuote.TextChanged
    txtQuote.ForeColor = Color.Red
End Sub
```

Visual Basic 2017

36

## Review: Visual Basic Project

- Creating your project
  - Name
  - Location
- Locating your project
- Turning in your project
